BUSINESS REPORT - Monthly Ecommerce Performance Monitoring

This report summarizes the project's primary monitoring views. Supporting analyses such as MoM variance and cohort output remain in Python outputs and documentation rather than the main report.

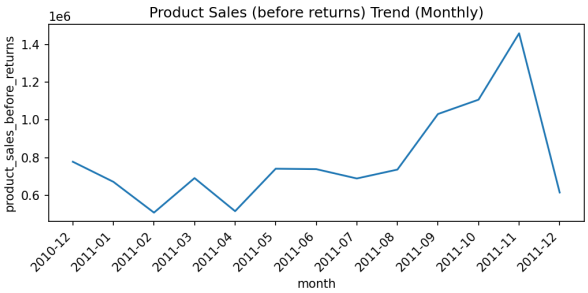
1) Executive Summary

Latest full-month snapshot (2011-11):
- Product Sales (before returns): 1,458,896
- Return Burden: 1.7%
- Top50 SKU Coverage: 27.3%
- SKU HHI: 0.0030

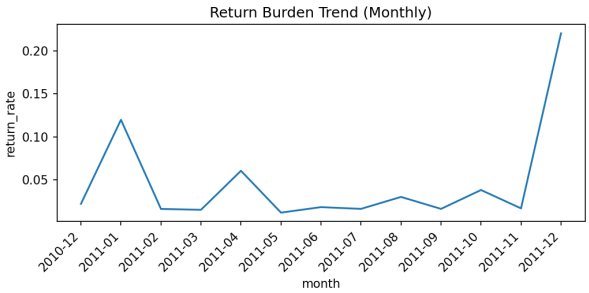
Business reading:
- Product sales are monitored across the monthly series, while the latest full month is used as the formal current-state summary point.
- Return burden remains a monitoring signal rather than direct proof of quality or logistics failure.
- Product concentration is tracked using both Top50 SKU Coverage (head concentration) and SKU HHI (overall concentration structure).

Partial-month handling: 2011-12 is incomplete in the source data and is shown as a watchout signal only, not as a normal comparison point for confirmed conclusions.

Product Sales Trend



Return Burden Trend



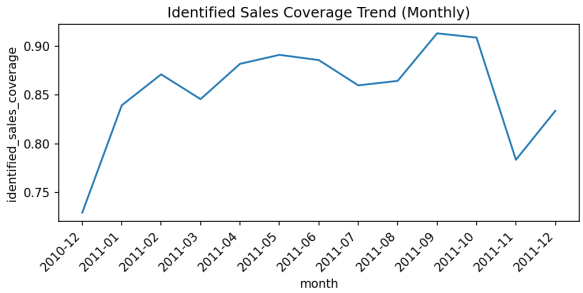
2) Customer Health

Customer-level views in this report apply to identified customers only. Coverage metrics are included to show how representative those views are relative to total product sales.

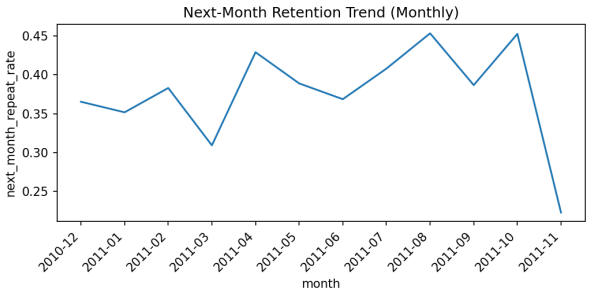
Latest full-month identified sales coverage (2011-11): 78.4%
Latest stable next-month retention (2011-10): 45.3%
Latest full-month Top10 Customer Share (2011-11): 15.4%
Latest full-month Customer HHI (2011-11): 0.0039

Business reading:
- Identified sales coverage shows how much of product sales can actually support customer-level analysis.
- Retention is treated as a customer health signal, with the latest stable point excluding periods whose following month is incomplete.
- Top10 Customer Share and Customer HHI are used together to assess whether identified-customer sales are overly dependent on a narrow customer base.

Identified Sales Coverage Trend



Next-Month Retention Trend



3) Returns / Product Risk

Return analysis focuses on merchandise returns only. Top return SKU outputs are used for driver discovery and drill-down prioritization rather than direct root-cause proof.

Latest full-month return burden (2011-11): 1.7%
Latest full-month merchandise return value (2011-11): 25,011
Latest full-month merchandise return units (2011-11): 12,332

Latest full-month top return SKU watchlist:
- RED RETROSPOT CAKE STAND: 1,343
- REGENCY CAKESTAND 3 TIER: 1,001
- CHILDS BREAKFAST SET DOLLY GIRL : 638
- SET/3 VANILLA SCENTED CANDLE IN BOX: 483
- GIRAFFE WOODEN RULER: 475

Business reading:
- Aggregate return burden can remain relatively low while still warranting SKU-level drill-down.
- Top return SKUs indicate which products deserve further review, but extreme values still require transaction-level validation before stronger attribution.
